

STATEMENT OF WORK

Design Partner Pilot — Total Rewards Accelerator

Mikéz Comp Engineering Toolkit (v0.3): Cleaner · Placement Engine (YOE + Education) · Equity Auditor · Flight Risk · Merit Remediation · Candidate Tracker · Closer

1. Parties & effective date

Provider	Client	Effective date	Pilot end date
Michael Lopez / Mikez L.L. HR & Lean Global Solutions (or successor) — "Provider"	[CLIENT LEGAL NAME] — "Client"	[MM/DD/YYYY]	[MM/DD/YYYY] (4–6 weeks from kickoff)

Contacts: Provider — mikez.lopez15@gmail.com · Client — [Name, email, title]

2. Purpose

Provider delivers a fixed-scope Design Partner Pilot of the Total Rewards Accelerator with hands-on Comp Engineering advisory. The pilot applies a shared **Placement Engine** (wage-calculator mindset: years of experience + education → expected position-in-range) alongside classic market mid-compa. Goals: clean HRIS-style data; surface equity and experience-adjusted placement gaps; model merit remediation (mid and/or expected placement); assess flight risk with explainable drivers; optionally support offer total-wealth messaging. Early access / design-partner software — not GA multi-tenant SaaS.

3. Product modules in scope

- Market Data Cleaner — messy HRIS exports, mapping, money/dates/ratings, YOE & education fields.
- Placement Engine — expected rate/compa from experience + education credits vs range min–mid–max; keeps classic actual compa (pay ÷ mid).
- Pay Equity Auditor — mid-compa heatmap, under/over flags, top raise targets, top placement gaps.
- Flight Risk — rules-based 0–100 with drivers (including gap below expected placement).
- Merit / Remediation — fund toward market mid, expected placement, or max of both.
- Candidate Tracker + Closer — pipeline; 4-year wealth PDF; optional recommended base from placement.

4. Scope of services (included)

- Kickoff (≤60 min): goals, metrics, data approach, placement policy assumptions (years-to-mid, education credits).
- Scrubbed-data guidance; Cleaner run on Client file or sample (YOE/education mapping where present).
- Dual-lens readout: (a) mid-compa / gap-to-parity; (b) expected placement / placement gap from YOE + education.
- Flight-risk overview with transparent drivers (not legal/clinical/guaranteed attrition prediction).
- Merit sandbox: ≥1 primary pool scenario + 1 alternate (Client sets pool \$ and target mode).
- Optional: Closer with placement recommendation and sample total-wealth PDF.
- Written summary (~2–4 pages): findings, illustrative \$ impact, next steps.
- Two office-hour sessions (≤45 min each) during pilot term.
- Roadmap input: Client ranks top 3 feature requests (e.g., custom Exp Key / education credit tables).

5. Out of scope

- Full ownership of Client annual merit/budget process.
- Legal pay-equity certification, attorney opinion, or regulatory filing.
- Production HRIS integration, SSO, or enterprise security certification (e.g., SOC 2).
- Unlimited enterprise seats or multi-entity programs beyond agreed scope.
- Payroll write-back or permanent hosting of Client production databases.
- Custom ML flight-risk models on Client data (rules-based only unless separately scoped).

6. Client responsibilities

- Scrubbed data (no SSN/national ID; prefer hashed/synthetic IDs) or approved sample approach.
- Where possible: years of experience, education, and required education / job minimums for placement.
- Single point of contact for pool assumptions, policy choices, and scheduling.
- Attend sessions; timely feedback on drafts and placement defaults.
- Outputs for internal evaluation/pilot unless otherwise agreed.

7. Fees & payment

Package	Investment (USD)	Payment schedule
---------	------------------	------------------

Design Partner Pilot (standard)	\$4,500	50% at signature/kickoff; 50% at final readout
Early-bird (first 3 seats, if offered)	\$3,000	100% upfront preferred
Complex / multi-entity (if scoped)	\$6,500	50% / 50% as above

Selected: ☐ \$3,000 ☐ \$4,500 ☐ \$6,500 Total: \$_____ Net 15. Virtual-first.

Cancellation: full refund before kickoff; after kickoff, fees earned for work delivered non-refundable.

8. Data, IP, disclaimers & term

Data: Client is controller; Provider processes only for pilot. Prefer scrubbed files. No training of public foundation models on Client EE data. Delete within 30 days after close (or sooner on request), except anonymized learnings. Mutual confidentiality 3 years. Outputs are decision-support only — not legal/tax/pay-equity certification. Placement and flight-risk scores are policy-configurable heuristics, not guarantees.

IP: Client owns Client data and Client-specific outputs. Provider owns Accelerator software, Placement Engine methods, templates, generic improvements. Non-exclusive internal-use license for pilot outputs. No resale/reverse engineering/sublicense.

Liability: Early access AS IS. Except willful misconduct, Provider liability capped at fees paid under this SOW. No consequential damages. Case studies need written approval (anonymized LinkedIn: ☐ Yes ☐ No).

Term: Effective Date through Pilot End Date. Terminate for convenience with 7 days' notice; pay for work performed. Post-pilot retainer/SaaS under separate agreement. Governing law: Colorado, USA (or mutually amended).

9. Acceptance

By signing below, the parties agree to this Statement of Work.
